

## ABSTRACT

The present invention provides a fast pedestal for shower panel, fully utilizing original component pre-built on the wall to conveniently mount it, wherein said fast pedestal is comprised of a carrier and a retainer ring, therein  
5 said fast pedestal is tabular structure, which has a socket formed on the middle of upper portion for connecting to the original component in socket joint, and fastened on it by securing said retainer ring, and there is a connecting device cooperating to the shower panel built upon said fast pedestal. By means of the outlet of pipe line extended out the wall, said fast pedestal is hung and secured  
10 on the wall with the socket and retainer ring, the shower panel is hooked on to the fast pedestal, after connecting all the line pipe at inside of the shower panel, the shower panel is ready for working. So, the present invention can meet the requirement of the working site without destroying the surface of the wall, and carry out mounting a shower set on a hidden-pipe wall, meanwhile  
15 develop the product using range.
